Hazardous Equipment Affidavit Transformers/Capacitors

Pertaining to all purchases of potentially dangerous components

PLEASE READ CAREFULLY

The following must be completed, signed and dated for purchase of any transformer over 30 milliampere short circuit current or energy storage capacitor over 50 joules

May be faxed to 1 603 672 5406 or E Mailed to <sales@amazing1.com>

TRANSFORMERS

High voltage transformers that can supply currents in excess of 30 milliampere are considered potentially lethal. *When transformers are used for neon signs, a ground fault interrupter (GFI) shuts down any ground current over 5 milliamperes.* Many high voltage transformers used in research are ground referenced creating an extreme shock hazard and do not have this safety feature.

CAPACITORS

Capacitors with voltage ratings over 450 volts and energy storage over 50 joules are potentially lethal. Capacitors can hold these lethal charges indefinitely and must be discharged with a suitable probe before contacting.

These components are intended for experienced personal in handling and working with high voltages.

Insert part numbers and values

I _____ employed by _____

and am fully aware that the *electrical components* as sold will require proper housings, safety interlocks, fusing, labelling, qualified operating experience and safety compliances for their intended use. I fully understand all hazards and liabilities with the product in question. I will not hold **Information Unlimited** responsible in any way for injuries/or damages resulting from proper or improper use of these components, parts or finished products.

SIGNED _____

DATED _____

*DRIVERS LICENSE OR OTHER IDENTIFICATION or _____

***Drivers license/ID are not required for purchases to known companies.**

Hazardous Equipment Affidavit non Compliant Lasers class 3b& 4

To : Customer name _____ Date _____

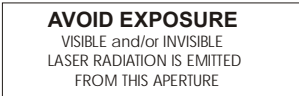

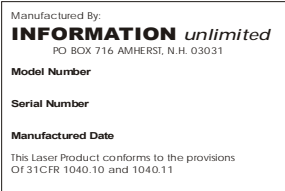

Address _____

Contact _____

To whom it may concern:

The laser product you are purchasing is an uncertified laser device as specified by the FDA/CDRH for end use. The uncertified product as sold is intended to be used in a certified laser product requiring the following:

Labelling: (examples as shown)

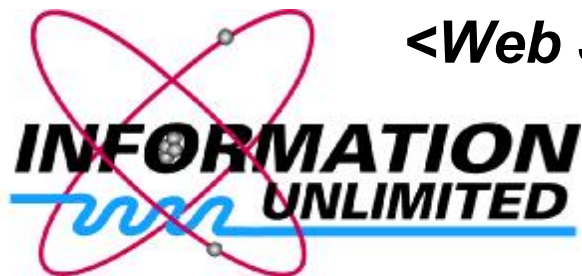

1. A keyswitch with non removeable key in the “on” position
2. Emissions indicator lamp
3. Aperture shutter
4. Emission delay circuitry
5. Protective interlocks if classiv

You may obtain the performance standard on the web at.....FDALASER PERFORMANCE STANDARDS

Authorized signature _____

Hazardous Equipment Affidavit Systems & Contracts

Pertaining to all contract requests for high voltage assemblies, Class IV laser systems, high powered magnetic launchers, rail guns, high energy systems, shock pulsers, power supplies and components.

PLEASE READ CAREFULLY

CLASSIV LASERS: These devices are in full FDA compliance. They are capable of inflicting permanent eye and skin damage, starting fires and damaging objects. These products require high voltages that are also electrically dangerous.

HIGH VOLTAGE POWER SUPPLYS: All power supplys producing over 30 milliamps to ground are considered hazardous. Any capacitor capable of storing over 50 Joules is potentially hazardous. X-rays and other harmful radiation can be generated from high voltage sources over 100 kv.

ELECTRO-KINETIC: These devices are capable of projecting objects at ballistic velocities that can kill or maim a human being. They can cause objects to explode with high detonation velocities, create intense magnetic fields and cause damage to sensitive equipment. Devices as sold use very dangerous life threatening high voltages and will require proper enclosures, interlocks and labeling to prevent accidental contact.

EMP/MARX: These devices are capable of damaging electronic equipment. They are open construction and are extremely electrically hazardous. They are intended to be operated by experienced personnel in the related fields of high voltage and high energy devices.

SPECIALY BUILT MODULES or SYSTEMS are built to customer specifications. It is strongly advised to include proper enclosing, shielding, interlocking, labeling and warnings that may add to the project costs. Proper operating procedures conducive to the surroundings are the responsibilities of the purchaser. It is the purchasers responsibility to verify any necessary compliances or regulations necessary for using this equipment at his premises.

BRIEF PRODUCT DESCRIPTION

DISCLAIMER : I am fully aware that these *devices* if not specified may require proper housings, safety interlocks, fusing, labelling, qualified operating experience and safety compliances for their intended use. I fully understand all hazards and liabilities with the product in question. I will not hold **Information Unlimited** responsible in any way for injuries/or damages resulting from proper or improper use of the contract project.
