

What Our Ultrasonic Products Can and Cannot Do for You

Effects and Usage

- Our ultrasonic devices will not physically knock down, cause injury or be used for physical defense. It is strongly advised that a secondary backup be used if conditions like this exist. We do have other devices that are more physical, but do carry the threat of increased liability when used. [Check our website for these other options.](#)
- They can discourage, and many times prevent unwanted encounters and dangerous home intrusion. For dangerous areas you should have appropriate back up!
- They can be easily interfaced and connected to your existing home alarms and video systems adding an effective deterrent against unauthorized intrusions.
- They can be used to keep out unwanted people and animals from your property and protected areas by a combination of inaudible and/or audible sonic waves.
- They have been successfully used to break up unruly parties, rowdy groups and other bothersome gatherings of disorderly people.
- They can be used for animal control: to stop dogs from barking is the most common use, but many have also been used to drive off animal pests from damaging gardens, bird feeders, campsites, etc.
- Extremely dangerous areas may require a deadly force backup for a final line of defense. Seek help from the police, but remember that the average national response time is 11 minutes, so you should not depend solely on calling 911 for protection against an imminent threat.
- These products will not perform to their optimum capability unless you read and use the instructions included with the product, which may also be downloaded at no cost before you purchase the item.

Modes of Operation

These ultrasonic products produce three types of sonic energy:

- **The first mode** is inaudible ultrasonics that first causes pressure pains with continued exposure causing nausea, disorientation and other debilitating effects.
- **The second mode** is a combination of inaudible ultrasonics and audible shrieks. This mode produces immediate affects ranging from debilitating and incapacitating, to enervating fear and threatening, to sickening nausea and nerve racking pain.
- These devices are capable of providing nearly unlimited combinations of ultrasonic frequencies that the user might find some more effective than others by experimenting for optimizing on his problem targets.
- **The third mode** is audible output, often used as a home alarm, or for example by realtors showing properties where a client may have a problem and need help. This mode is mainly an audible alert, but also has adjustments that produce a wide range of sonic effects.

Rental Program

Some (but not all) of our ultrasonic devices include a Rental option which allows you to try the device and see if it will work for your application. You purchase the device at full price as a normal purchase, and then have the allocated amount of time to try out the ultrasonic device and see if it works for your needs. If it does, simply keep the device and we consider the sale as finalized. If it does not, then you may return the device and we will refund your payment minus the rental fee and shipping costs.

This helps if you are in doubts about the effects of these units on your particular target, where we suggest you take advantage of our rental program on the applicable products.
